EDUCATION

Bachelor of Science (Honours): Computer Science Co-op Sep 2020 – May 2026

Toronto Metropolitan University, Toronto, ON

Master of Digital Media

Toronto Metropolitan University, Toronto, ON May 2026 - Apr 2027

WORK EXPERIENCE

Intern Analyst, Data & Technology, University Pension Plan May 2025 - August 2025

- Engineered Python ETL pipelines leveraging PyPDF2, pandas, and regex parsing to extract and transform 10K+ pension records from unstructured PDFs into normalized Excel datasets.
- Developed automated workflows using Microsoft Power Automate with custom REST API integrations to handle IT change management, risk assessment, and security compliance data flows across enterprise systems.
- Built interactive KPI dashboards in DOMO using SQL queries and data modeling techniques, implementing aggregated metrics, time-series visualizations, and drill-down functionality to deliver quarterly executive reports with actionable operational insights.

Accessibility Analyst Co-op, Ministry of Children, Community and Social Services (OPS) May 2023 - August 2024

- Developed and maintained custom Single Page Applications (SPAs), dynamic forms, and responsive web pages for the Accessibility Center of Excellence (ACOE) team and Ontario Public Service (OPS) clients.
- Conducted comprehensive accessibility audits using WAVE, axe DevTools, and NVDA screen readers to identify WCAG 2.1 Level AA violations; remediated semantic HTML, ARIA attributes, keyboard navigation, and color contrast issues across OPS web properties, delivering detailed compliance reports with code-level remediation strategies.
- Participated in Agile sprint planning and retrospectives using Jira, implemented CI/CD pipelines with Azure DevOps for automated testing and deployment, and collaborated in daily stand-ups with cross-functional teams to deliver features

PROJECTS

Interactive React Tutorial

- Designed and developed an interactive React tutorial that guides learners through a 50-step build of a todo application, covering state management, side effects, routing, memoization, and testing.
- Built a live app preview alongside step-by-step code panels and a type-along editor to create a hands-on learning experience with real React features like useState, useReducer, useEffect, useContext, MemoryRouter, and fetch.
- Structured the project as a progressive learning experience inspired by The Odin Project Curriculum, with feature flags, reusable demo components, and test coverage to validate each lesson step.

Applify.ltd

- Built full-stack TypeScript SaaS application with React and Node.js for AI-powered resume generation, scaling to **100+** active users in production
- Designed PostgreSQL database with Prisma ORM managing 15+ normalized entities for user data and resume versions, implementing WASP authentication and Stripe subscription webhooks with credit-based payment system
- Integrated OpenAI API with custom prompts for ATS optimization and job-specific tailoring, developing WYSIWYG editor with inline editing capabilities and server-side PDF generation using puppeteer.

Technical Skills

Languages and Standards: JavaScript, Python, TypeScript, WCAG(2.0/1/2), IASR

Technologies: Git (Gitlab and Github), React, Tailwind, Node.js, SQL, MongoDB, R, Pandas and Numpy
